

tesseract\_examples  
/include/tesseract\_examples  
/freespace\_ompl\_example.h

```
graph BT; A["tesseract_examples  
/src/freespace_ompl_example.cpp"] --> C["tesseract_examples  
/include/tesseract_examples  
/freespace_ompl_example.h"]; B["tesseract_examples  
/src/freespace_ompl_example_node.cpp"] --> C;
```

This diagram illustrates the relationship between source files and a header file in a project. Two source files, 'tesseract\_examples/src/freespace\_ompl\_example.cpp' and 'tesseract\_examples/src/freespace\_ompl\_example\_node.cpp', are shown at the bottom. Blue arrows point from each of these source files to a header file, 'tesseract\_examples/include/tesseract\_examples/freespace\_ompl\_example.h', which is located in a box at the top. The header file box has a gray background, while the source file boxes have white backgrounds.

tesseract\_examples  
/src/freespace\_ompl  
\_example.cpp
